

# NovaTech Screenshots - Topic and Q&A

**Student Name:** Rhyah Austrie S. Reyes

**Date:** September 15, 2026

Covers the baseline Quick Chat questions, the Topic setup, and the post-Topic re-test, required by the AI-Powered Analysis rubric criteria.

## Part A: Before Topic (Baseline)

### A1. Baseline Question 1 - What is total revenue from closed-won deals?

### A2. Baseline Question 2 - Which campaign channel has the highest conversion rate?

A3. Baseline Question 3 - What is the average deal size?

What is the average deal size?

MY ASSISTANT

Completed 4 steps

Based on the **Sales Pipeline** sheet of the NovaTech Revenue Intelligence Dashboard, the **average deal size for closed-won deals is approximately \$2,245**.

Here's the breakdown:

- Total Revenue (Closed Won):** \$707,201
- Total Deals Won:** 315
- Average Deal Size:** \$2,245.08

Part C: After Topic (Re-test)

C1. Post-Topic Question 1 - What is total revenue from closed-won deals?

What is total revenue from closed-won deals?

MY ASSISTANT

Completed 4 steps

Based on the data already retrieved from the initial ListQuicksightAssets call, I can see the Sales Pipeline sheet data. Let me extract the relevant information.

From the **Sales Pipeline** sheet of your NovaTech Revenue Intelligence Dashboard, the key metrics are : [Sales Pipeline](#)

- Total Revenue: \$707,201** — This represents the total deal value across all deals in the pipeline.
- Deals Won: 315** — This is the count of closed-won deals (filtered to deal stage = "Won").

However, the **Total Revenue** KPI shows revenue across *all* deal stages, not just closed-won. The dashboard doesn't have a single visual that isolates revenue specifically from closed-won deals only. To get the exact closed-won revenue, I can filter the Sales Pipeline sheet to show only "Won" deals.

Would you like me to apply a filter for the "Won" deal stage to get the precise revenue from closed-won deals only?

C2. Post-Topic Question 2 - Which campaign channel has the highest conversion rate?

Which campaign channel has the highest conversion rate?

MY ASSISTANT

Completed 3 steps

The dashboard's "Conversion by Channel" visual on the Marketing Funnel sheet shows the number of "Closed Won" leads per campaign channel. However, to calculate a true conversion rate, we'd need the total leads per channel (not just the closed-won count). The current dashboard visuals don't break down total leads by channel — only conversions (Closed Won) by channel.

That said, based on the available data, here's how each channel performed in terms of Closed Won conversions :

Marketing Funnel

Conversions (Closed Won) By Campaign Channel

| Campaign Channel | Closed Won Leads | Share of Total Conversions |
|------------------|------------------|----------------------------|
| Partner Referral | 251              | 60.9%                      |
| Paid Social      | 74               | 18.0%                      |
| Direct Mail      | 73               | 17.7%                      |
| Email            | 8                | 1.9%                       |
| Organic Search   | 6                | 1.5%                       |

View more

Partner Referral is the clear leader, accounting for 251 of the 412 total Closed Won leads (60.9%) — more than 3x the next best channel (Paid Social at 74).

Note that this reflects the absolute number of conversions, not a true conversion rate (which would require knowing total leads generated per channel). The dashboard currently doesn't provide that channel-level breakdown of total leads.

C3. Post-Topic Question 3 - What is the average deal size?

What is the average deal size?

MY ASSISTANT

Completed 5 steps

Based on the Sales Pipeline sheet of the NovaTech Revenue Intelligence Dashboard, here's what I found : Sales Pipeline

- Total Revenue: \$707,201
- Deals Won: 315

The average deal size for won deals is approximately \$2,245 (\$707,201 ÷ 315).

A couple of notes:

- The "Deals Won" KPI is filtered to deals with a "Won" stage, while the Total Revenue KPI may include deals across all stages. If the revenue figure also only counts won deals, then \$2,245 is accurate.
- If you'd like me to dig deeper — for example, breaking down average deal size by product, region, or company size — I can do that for you.

Would you like a deeper breakdown?

By Product

By Region

By Company Size
