

NovaTech Screenshots - Data Transformation

Student Name: Rhyah Austrie S. Reyes

Date: September 15, 2026

Covers the join diagram, join configuration, calculated fields, and data type corrections required by the Data Preparation and Quality rubric criteria.

1. Data Type Corrections

e.g., `annual_revenue_usd`, `deal_value` → **Decimal**; `employee_count`, `list_price` → **Integer**; `deal_created_date`, `deal_closed_date` → **Date**

The screenshot shows the Amazon QuickSight Data Transformation interface. The dataset is `novatech_crm_deals.csv`. The transformation step is **Change data type 1**. The configuration panel shows 6 columns with data type changes:

COLUMN NAME	ORIGINAL DATA TYPE	NEW DATA TYPE	Notes
<code>annual_revenue_usd</code>	Decimal	Decimal	
<code>employee_count</code>	Integer	Integer	
<code>list_price</code>	Integer	Integer	
<code>deal_created_date</code>	Datetime	Date	Date format is set to yyyy-MM-dd.
<code>deal_closed_date</code>	Datetime	Date	Date format is set to yyyy-MM-dd.
<code>deal_value</code>	Decimal	Decimal	

2. Calculated Field - days_to_close

The screenshot shows the Amazon QuickSight Data Transformation interface. The dataset is `novatech_crm_deals.csv`. The transformation step is **Add calculated columns 1**. The configuration panel shows 1 calculated column:

Column name	Calculation definition	Actions
<code># days_to_close</code>	<code>dateDiff(deal_created_date, deal_closed_date, "DD")</code>	Edit, Delete

4. Calculated Field - resolution_time_hours
